Interactive Power BI Dashboard

Strategic Procurement Analysis & Insights

🔗 **Access Dashboard**: Open Power BI Dashboard

Project Summary

This Power BI project delivers a comprehensive Procurement Performance Dashboard designed to track and optimize cost efficiency, supplier reliability, compliance, and overall purchasing performance. The report unifies spend, savings, delivery, and supplier KPIs into actionable visuals — helping decision-makers identify risks, benchmark suppliers, and improve procurement strategy across categories.

Page 1 — Executive Summary
Shows overall procurement performance — spend, savings, delivery, and risk — with a spend bridge and top-risk supplier insights.

Page 2 —Spend Analysis – Spend & Savings Breakdown
Compares realized spend and savings % across suppliers and categories, revealing monthly cost trends and efficiency levels.

Page 3 —Supplier Scorecard – Performance & Risk Overview
Evaluates supplier performance through KPI scores, trends, and a spend–score scatter to identify high-value or risky suppliers.

Page 4 —Cycle Health – Delivery Performance
Analyzes delivery reliability using lead-time percentiles, late-day intensity, and OTD % to uncover delay patterns.

Page 5 — Compliance & Leakage
Highlights maverick and non-compliance spend to pinpoint policy violations and financial leakages.

Page 6 — Order Details – Purchase Overview
Provides line-level purchase order data for drill-through insights on spend, savings, and delivery compliance.
